FOREWORD

This is the eighth edition of the *Directory of Criminal Justice Issues in the States*. Published by the Justice Research and Statistics Association, the *Directory* is an information resource designed to support criminal justice policy makers, practitioners, and researchers in their efforts to improve management of the justice system in the United States and its territories. It describes, by jurisdiction, many of the justice-related issues and problems examined throughout the country during 1990. It also summarizes a vast amount of substantive and methodological research undertaken by the Statistical Analysis Centers in response to these issues and problems.

On behalf of the Association, I would like to thank the Statistical Analysis Centers for their contributions and guidance in preparing the eighth edition of the *Directory*. I would also like to thank the Bureau of Justice Statistics, Office of Justice Programs, U.S. Department of Justice for continuing to provide the financial support needed to publish the *Directory* and disseminate it to the states.

I hope you find the *Directory of Criminal Justice Issues in the States* to be an informative and useful resource.

Mike Sabath
President, JRSA
Director, Center for Criminal
Justice Research and Information
Indiana Criminal Justice Institute

HOW TO USE THIS DIRECTORY

The *Directory of Criminal Justice Issues in the States* is a handy reference to state activities and research in criminal justice. The book is organized into five sections for easy use.

- Section I contains a brief summary of the Statistical Analysis Center (SAC) research and analysis activities listed in the *Directory*. It focuses on the major criminal justice policy issues confronting the states in 1990.
- Section II provides a detailed listing of SAC activities including the project title, a brief description, data sources used, date of completion, and a contact person for each SAC activity. The list is in alphabetical order by state to aid the reader in locating a particular state or agency.
- Section III is an index of all SAC activities by issue area. The 38 issue areas found in the index are listed on page 56.
- Section IV includes a listing of recent reports published by the Statistical Analysis Centers and provides the reader with a list of criminal justice reports available from the SACs.
- Section V consists of two appendices. The address and telephone number of each Statistical Analysis Center are contained in Appendix A. The reader may request information about the research designs, findings, and other detailed project information by contacting the appropriate agency and person.

Appendix B contains a brief description of the Justice Research and Statistics Association and several products offered by JRSA. Among these are the Computerized Index to Data Sources (CIDS) from which this directory is drawn, and the IMPACT forecasting package. For further information, contact the Association directly.

INTRODUCTION

The *Directory of Criminal Justice Issues in the States* is a guide to criminal justice programs and policy research conducted by the state Statistical Analysis Centers (SACs). The *Directory* is presented as an aid to all who seek to identify sources of state criminal justice information. National policy makers will learn the major criminal justice issues under debate and analysis in the states. State policy makers will gain knowledge about the current activities of other states for the exchange of criminal justice information. Agencies interested in developing criminal justice libraries or resource materials will find this publication of special value, not only as a resource in its own right, but also for the information it provides on available SAC publications.

Located in almost every state, the SACs conduct objective analyses to meet critical planning needs and address statewide and systemwide criminal justice policy issues. These agencies contribute to viable, effective policy development through statistical services, research, evaluation, and policy analysis.

The SAC program originated in 1972 as a component of the National Criminal Justice Information and Statistics Service (NCJISS). Although some SACs are predominantly funded by their states, they continue to maintain a close working relationship with the U.S. Department of Justice, Bureau of Justice Statistics which supports special research and analysis activities. Since the advent of state funding, a majority of the agencies have taken a variety of titles. The generic term Statistical Analysis Center (SAC) is used throughout this directory for consistency's sake.

In 1983, the staff of the Justice Research and Statistics Association (then called the Criminal Justice Statistics Association) first surveyed the SACs on the types of research and analytical activities in which they were involved and developed a computerized index to state activities in criminal justice. The index (called Computerized Index to Data Sources or CIDS) contains information on SAC research and activities, SAC reports, and characteristics of state automated data sets. Information from CIDS was compiled to publish the first *Directory of Criminal Justice Issues in the States* in June 1984, and it has been published annually since then.

CIDS now contains information on SAC activities from 52 states and territories. This directory is a summary of the 1990 activities and publications of the SACs.

THE MAJOR CRIMINAL JUSTICE ISSUES IN 1990

The late 1980s and early 1990s have marked an era of dwindling resources, not only for the individual, but for all levels of government as well. Under these circumstances, it is especially important that decision makers receive accurate and reliable information when targeting criminal justice programs for the allocation of scarce resources. The SACs perform a critical role in public policy development by providing decision makers with information on crime and criminal justice data quality and availability as well as on substantive policy issues. Each year the SACs report on the criminal justice issues in which they are involved. Many SACs examine similar issues, indicating areas of national concern. An analysis of the criminal justice issues addressed by reported SAC activities across the nation reveals that certain issues are predominant. These issues span the entire criminal justice system and include police, courts, and corrections as well as juvenile delinquency, recidivism, and substance abuse. The following table presents issue areas studied by the SACs, and the number of states involved in each one from 1988 to 1990.

ISSUE	NO. OF STATES			ISSUE	NO. OF STATES		
	1990	1989	1988		1990	1989	1988
Police	35	32	37	Homicide	10	12	17
Substance Abuse	28	27	32	Pretrial Release	9	13	16
Sentencing	24	26	29	Rehabilitation	8	10	13
Courts	23	26	34	Risk Assessment	8	7	9
Juvenile Delinquency	22	23	29	Crime Prevention	7	12	18
Personnel/Management Issues	20	22	21	Expenditures/Budget/Finance	7	4	—
Jail	19	23	32	Prisons	7	4	—
Corrections	18	14	—	Domestic Violence	7	12	19
Overcrowding	18	21	27	Sexual Assault	7	11	12
Prosecution	17	22	26	Traffic Safety	6	7	10
Victims	17	16	23	Child Abuse	6	7	14
Probation	14	16	24	Plea Bargaining	5	9	16
Projections-Population	14	18	24	Status Offenses	5	5	10
Recidivism	14	21	17	Restitution	4	4	7
Alternatives to Incarceration	12	13	18	Missing Children	4	2	1
Drunk Driving	12	13	23	Bail	4	5	11
Public Attitudes	11	9	13	Bias Crime	3	2	1
Projections-Crime	11	11	16	Female Crime	3	5	11
Parole	10	17	25	White Collar Crime	2	4	2

The development of a new classification scheme for SAC activities in 1990 resulted in alterations to the numbers of SAC activities in certain content areas. This new scheme created a distinction between standard statistical reporting versus focused topical research. This resulted in fewer entries per issue areas across the board. The lower numbers for 1989 and 1990, therefore, should not be interpreted as a downturn in SAC activities from 1988 and 1989. In addition, two categories have been added to the list of issues. A category of "corrections" was added because broad categories existed for other components of the criminal justice system including "police" (law enforcement) and "courts." Additionally, the "prisons" category was added to allow a distinction between the work SACs do relating to jails and prisons. A third issue, "expenditure/budget," was added to reflect the emerging importance of this topic as a SAC analysis activity. This topic has become such an engaging one for SACs, that in 1990, only the second year it was included in the *SAC Activities Survey*, the number of agencies working on budget matters nearly doubled.

As the Federal government increased the amount of funds available for drug control and system improvement activities in fiscal year 1990, the states were able to expand their activities in the effort to eradicate drug-related crime, illustrating that this effort is not just a Federal one, but a national one being confronted on all levels of government. SACs continued to be involved in data collection and analysis of statistics in several areas including anti-drug task forces, drug offender processing, public attitude surveys, and crime labs.

As a result of law enforcement efforts to reduce crime and the proliferation of drugs, the criminal justice system continues to see the population of those under its authority rise to new levels. Statistical Analysis Centers remain involved in corrections-related issues including the analysis of trends in probation and parole, forecasting prison and jail populations, and examining alternatives to incarceration. Sentencing continued to be a major issue as 24 SACs examined matters such as sentencing alternatives and the effects of determinant sentencing on crowding in jails and prisons.

Juvenile delinquency continued to receive attention from the SACs as they studied several areas within the juvenile justice system including information systems; compliance with the Juvenile Justice Act mandating deinstitutionalization of juveniles from adult correction facilities; juvenile offenders; gangs and youth; and the effects of child abuse on criminality.

As in the two preceding years, the issue studied by the most states concerned police. SACs studied police procedures, compiled police policies and training manuals, and examined law enforcement turnover among other police-related issues. Police issues are likely to stay in the spotlight as policy makers try to determine how best to utilize this most important resource in fighting crime and drug abuse.

Because SACs address the major concerns of criminal justice decision makers, their activities serve as lead indicators of the most important criminal justice issues confronting the states and the nation. The following table provides a quick summary of the issues in which each state SAC is involved.

Issues for which State Statistical Analysis Centers (SACs) produced data or conducted research, calendar 1990

Computerized Index to Data Sources

THE DIRECTORY

ALABAMA

ACJIC Newsletter

The newsletter touches on topics of interest to sheriffs and police departments. It emphasizes the NCIC terminal standards and usage, but includes all the components of the Alabama Criminal Justice Information Center.

Data Sources: UCR/IBR, CCH, Police Departments, NCIC

Date of Completion: Continuing Activity

Agency: Alabama Criminal Justice Information Center
770 Washington Avenue
Suite 350
Montgomery, AL 36130

Contact: Therese Ford
(205) 242-4900

Alabama Rape Data

The data set contains information on age and race of victim and offender, the type of weapon used, the location of the incident, the relationship of the victim to the offender, and the month, year, day, and time of day of the incident.

Data Sources: UCR/IBR, Supplemental Rape Reports

Date of Completion: Continuing Activity

Agency: Alabama Criminal Justice Information Center
770 Washington Avenue
Suite 350
Montgomery, AL 36130

Contact: Therese Ford
(205) 242-4900

Check and Review of Incident Reports Sent into Alabama's UCR Program

This activity reviews the recordkeeping procedures of police and sheriffs departments to ensure compliance with FBI guidelines and definitions for UCR/IBR reporting. Emphasis also is put on sending the required paperwork for clearances and unfounded cases.

Data Sources: Police Departments, UCR/IBR

Date of Completion: Continuing Activity

Agency: Alabama Criminal Justice Information Center
770 Washington Avenue
Suite 350
Montgomery, AL 36130

Contact: Therese Ford
(205) 242-4900

Cooperative Agreement with Forensic Sciences

In this project, the Alabama Department of Forensic Sciences will forward drug information to the SAC for trend studies. This agreement is currently in the test phase.

Data Sources: Police Departments, Sheriffs Departments, UCR/IBR, Department of Forensic Sciences

Date of Completion: Continuing Activity

Agency: Alabama Criminal Justice Information Center
770 Washington Avenue
Suite 350
Montgomery, AL 36130

Contact: Therese Ford
(205) 242-4900

Crime Analysis for Jefferson County Sheriff's Office

The SAC uses sector number, time of day, and day of week to present crime data on eleven subdivisions in Jefferson County. Similar reports are available to any police agency using the IBR report forms for manpower reallocation.

Data Sources: UCR/IBR, Incident Report Forms

Date of Completion: Continuing Activity

Agency: Alabama Criminal Justice Information Center
770 Washington Avenue
Suite 350
Montgomery, AL 36130

Contact: Therese Ford
(205) 242-4900

Crime in Alabama Report

Clearance and arrest data are presented for the seven index offenses and arson, and are broken down by city, county, Metropolitan Statistical Area, and state. Charts, tables, graphs, and summary narratives are used to describe crime in the state for the current year.

Data Sources: UCR/IBR, Supplemental Crime Reports

Training Courses on the PC for Incident Reporting (UCR)

ACJIC developed a PC program to enable agencies in the field to report local crime data by computer diskette rather than by paper. It enables agencies to keep local databases of their crime statistics. This program was developed for use on MSDOS compatible hard disk computers to enable agencies in the field to report local crime data by computer diskette rather than by paper. This allows agencies to keep local databases of their crime statistics. These programs are available to any agency upon request. A training class was developed to assist local agencies in the use of these programs.

BCS Preliminary Report: Crime 1990 in Selected California Law Enforcement Jurisdictions

The SAC publishes a two-year comparison of preliminary crime counts reported by California law enforcement agencies serving populations of 100,000 or more. Information is published twice annually. Reports are for the January-June period (published in August), and the January-December period (published in February).

BCS Reports: Crime in California and the United States

This report compares California and the rest of the nation in six crime categories (homicide, forcible rape, robbery, aggravated assault, burglary and motor vehicle theft). California is compared with the other forty-nine states and the District of Columbia. Comparisons were done for 1988 and for the trend period of 1979-1988.

Citizens' Complaints Against Peace Officers

Each California law enforcement agency is required to establish a procedure to investigate citizens' complaints against the agency's law enforcement personnel. The number of complaints received is reported to the California Department of Justice. Data elements include non-criminal and criminal complaints. Data collected for each element include the number of complaints reported, unfounded, and sustained. The data collected are published in the annual *Crime and Delinquency in California* publication.

Domestic Violence-Related Calls For Assistance

As of January 1, 1986, the California legislature required statistical reports to be submitted to identify the extent of domestic violence in California. Data elements will include the number of domestic violence related calls for assistance, and information on weapon use by weapon type. Weapon type will include firearms, knives or cutting instruments, other dangerous weapons, and personal weapons such as hands or feet. These data will be published in the annual *Crime and Delinquency in California* and *Criminal Justice Profile* publications.

Outlook: Adult Felony Arrest Dispositions in California, 1988

Statewide adult felony arrest dispositions are examined. In 1988, the changing patterns from 1984 to 1988 in sentences for violent crimes, property crimes, and drug law violations were examined. Personal characteristics of age, race/ethnic composition, and sex of convicted offenders were also examined as well as the point of final disposition (police, prosecutor, lower court, superior court) following the arrest event. The 1988 report is currently available. Every three years a more extensive publication on this subject is prepared.

Court Data Collection

The SAC continues to collect data from district court felony cases. The sample for data collected in 1990 was selected from cases resulting in conviction and sentenced in 1989. A list of such cases in eight of the nine judicial districts sampled was provided from the Colorado district attorney database. Fifty percent of cases sentenced to probation and all cases sentenced to prison and directly to community corrections were included in the sample. Data continue to include offender demographics, offender needs, juvenile and adult criminal history, charge and conviction offense information, sentencing and placement information, and victim information if conviction offense is violent. Beginning with the 1989 cases, additional drug offense data were collected. These data include, for both charge and conviction, a description of the offense, and type and quantity of the drug(s).

Sentencing Trends in Colorado 1983-1989

Using the Division of Criminal Justice (DCJ) court database, the SAC has analyzed data, 1983 through 1989, from nine Colorado judicial districts to describe general sentencing patterns. A trend analysis will identify changes over time in offender profiles, type of offense at filing and conviction, and changes in the in/out decision. Additionally, system officials and legislators in the nine selected judicial districts are being interviewed on their perceptions of the trends described above. Prison population projection methodology will be reassessed according to the findings of the trend analysis.

Task Force on Justice for Abused Children: Follow Up Focus Group

The SAC provided staff support to the Governor's Task Force on Justice for Abused Children. The Task Force was asked to develop comprehensive solutions which ensure a systematic, interagency response to serious physical abuse and sexual abuse of children. The final report of the Task Force was published in February, 1989. The SAC provides staff support to the follow-up Focus Group which is charged with developing a plan to implement the changes recommended by the task force. The SAC served on the planning committee for a state-wide multi-disciplinary conference on the investigation and prosecution of child abuse, held in June 1990. A three year plan is being developed, including plans for information sharing among criminal, civil, and child care agencies.

Crime and Justice Report for the District of Columbia

The SAC report presents, on an annual basis, statistical charts and graphs that describe the activities and outcomes covering the different stages through which cases are processed. The data are presented in an order that parallels the actual flow of cases through the criminal justice system. The *Crime and Justice Report* is a complete statistical profile of the District's criminal justice system. The report compiles data from various agencies and information systems within the District's criminal justice system and tracks the flow of individuals through these agencies. Reported in the book are five and ten year trend data, when possible, to facilitate meaningful analysis.

Drug Abuse and Crime in the District of Columbia: A Follow-Up Report

This report is a comprehensive review of various indicators of drug abuse and drug-related crime in the District. This report presents and discusses a host of data and information about trends in overdose deaths and emergency room drug mentions, drug urinalysis test results, and criminal justice activity. It also offers profiles of adult and juvenile arrestees and treatment clients. Also discussed here are drug- and crime-related issues including AIDS in the criminal justice community, undercover police work, and factors characterizing the lives of drug addicts.

Database Work: Criminal Justice, Demographic, Economics

The SAC has quarterly time series data for each of Florida's 67 counties and state totals which are available in ASCII format (1980-present), and are pertinent to applied statistical analysis of the criminal justice system. The database includes demographic data (age, race, sex), employment and unemployment rates, and a detailed UCR arrest database broken out by 54 demographic variables. Other UCR time series data are also available.

Technical Report Series

In 1990, the Florida SAC and FDLE's Office of Research and Planning began preparing a series of technical reports. Topics for these reports are determined by timeliness, local interest, and data availability. The first of these reports covered the use of weapons in the commission of violent crimes. Reports of juvenile justice and DUI crackdowns also are available. The series will continue in 1991, although specific topic areas have yet to be identified.

Research Agenda Survey Project

In an effort to develop an agenda of important research issues in criminal justice, over 500 criminal justice practitioners and state leaders were surveyed. The survey asked respondents to rank the importance of information on issues contained in four basic areas: crime, process, system, and offenders. The 26 question survey garnered a 63% response rate and will be utilized by the Statistical Analysis Bureau to develop future research projects which will help fulfill the future informational needs of the entire criminal justice system of Georgia.

Homicide Research

The SAC maintains and disseminates, through the Criminal Justice Archive, a 17-year data set of all 13,000 homicides in Chicago. In the last year, the Chicago Homicide Data Set was updated to include 25 years (1965 to 1989) and over 18,500 cases, and expanded and enhanced to include, for example, consistently-defined drug- and street gang-related data over all 25 years. The Authority has handled numerous requests from city and national researchers and policy makers for analysis of this data set. In addition, the SAC developed

the Victim Level Murder File (VLM), which corrects a basic problem in Supplementary Homicide Report data. The VLM for Illinois (incident level) has been available from 1973 through 1983, and has just been updated through 1989. Additional years will be added as they become available. SAC staff have published numerous reports, journal articles, and a book based on analyses of these data, and more work is in progress.

Impact of the Jail I-Bond Program on the Population of the Cook County Jail

What would the jail population have been in each month since November 1986 if no Cook County Jail detainees had been released with Jail I-bonds? The Authority first attempted to answer this question for the Cook County Jail Administration in 1988 (Block & Spring 1988). Since then, Authority and Cook County Jail Management Information System staff have continued to update the analysis and to improve the precision of the data and the statistical procedures used. This report describes what the jail population would have been without I-bonds from November 1986 through August 1990 and explains the methodology used to arrive at those figures.

Methods for Geographic Crime Analysis

The space module of the Spatial and Temporal Analysis of Crime (STAC) package developed by the SAC searches for and describes "hot spots" of dense activity on a map of law enforcement data. With the availability of computer mapping and the TIGER files, requests for the STAC Hot Spot package have increased dramatically. Recently, the SAC has modified the STAC Hot Spot program to make data entry easier, and to calculate and plot more than one hot spot. This enhanced version of STAC is currently being tested in law enforcement agencies across the country.

Police Information Management System (PIMS)

The Police Information Management System (PIMS), is an automated information system designed to provide accurate and useful information to investigators, managers, and other decisionmakers in small to medium-sized police departments. The system maintains data about arrestees and all calls for service. In addition, it provides automatic UCR reporting, access to state and national criminal justice data systems, and on-line data searches. Computerized mapping, crime analysis, and interface to mobile data terminals is also supported.

Developed and operated by the Illinois Criminal Justice Information Authority, PIMS constitutes a significant enhancement of police analytical and tactical tools and could facilitate more strategic deployment of police resources.

Role of Crime Labs

The project analyzes the role of crime labs in criminal prosecutions, especially in drug cases. Using a systems perspective, it will evaluate how other elements of the system (court and police procedures and practices) affect the operations of crime labs and the speed and efficiency of their processing of criminal evidence, and how crime labs affect case processing times. Information gathered will support the Drug Information Network and other research activities.

Statistical Methods for Time Series Analysis and Projections

For more than ten years, the Illinois Criminal Justice Authority has conducted research on practical issues in time series analysis and forecasting in criminal justice. It has published numerous reports, including *How to Handle Seasonality: Introduction to the Detection and Analysis of Seasonal Fluctuation in Criminal Justice Time Series*, *Is Crime Seasonal?*, *Guide to Pattern Description of Time Series*, and *Is Crime Predictable?* The SAC developed a software package, Time Series Pattern Description (TSPAT), a tool for the initial exploration of time series data and for communicating results to a general audience. TSPAT is in use in criminal justice agencies across the country. Working with staff of the Cook County Jail, the SAC used IMPACT to estimate the size of the jail population if the "Jail I-Bond" program, which releases inmates on recognizance, had not been in effect, and has two forthcoming reports on this issue. The Illinois SAC publishes annual forecasts of offenses and arrests (by area of the state, age group, and specific crime type), and is currently conducting an evaluation of projection methods to determine if it is possible to increase the accuracy of these predictions. In addition, SAC staff handles frequent requests for help, gives advice on time series and forecasting issues, and teaches courses and workshops.

Analyzing School Drug-Incident Data

In January 1989, legislation was enacted requiring public school corporations to report information to the state about drug incidents occurring within 1,000 feet of school grounds. Since then, over 1500 incidents involving the possession, consumption, or dealing of alcohol and drugs have been reported by Indiana school officials. The Center is analyzing data from these reports to learn more about the prevalence of drugs in Indiana schools and the types of disciplinary actions being recommended by school authorities for various drug incidents.

Development of Incident-Based Reporting (IBR) in Indiana

In 1989, the Indiana Criminal Justice Institute received a two-year grant to implement an incident-based crime reporting system in the state. The Center for Criminal Justice Research and Information is managing the project. A policy advisory board has been formed to provide advice and guidance to the Institute and Center. Special committees have been formed to determine data elements to be included in the IBR system, to develop software for managing and reporting IBR data, and to organize IBR training for law enforcement and reporting agencies. The IBR project is now in the implementation phase in 33 police agencies.

Drug- and Alcohol-Related Arrests in Indiana During 1989

As part of a larger drug offender tracking study, the Institute and the Purdue University Automotive Transportation Center conducted a study to estimate the number and type of drug- and alcohol-related arrests made in Indiana during 1989. The study was based on a sample of arrests recorded in county jail records. Information from the study will help to identify the nature and scope of drug and alcohol abuse in the State and will serve as the basis for a future

statewide drug offender tracking study. A report on Phase I arrest data is now available.

Evaluations of Projects Funded under the Federal Anti-Drug Abuse Program

Indiana uses Federal Anti-Drug Act Abuse funds to support apprehension, crime lab enhancement, rehabilitation and treatment, and other projects throughout its criminal justice system. During the past two years, the Center for Criminal Justice Research and Information has coordinated formal evaluations of three of these projects: 1) two multi-jurisdictional drug task forces with different organizational and management structures, 2) an intensive supervision probation project for nonviolent drug offenders, and 3) a computer-assisted substance abuse identification and treatment project being implemented in the Department of Corrections. A report on the drug task force evaluation is available.

Tracking Juveniles Released from Indiana Boys' School

At the request of the Correctional Task Force on Juvenile Institutions, the Center conducted a study on juveniles released from the Indiana Boys' School (IBS). The primary purpose of the study is to determine the extent to which juveniles released from the IBS recidivate as measured by their subsequent incarceration in the juvenile or adult correctional and jail systems of the state. Another purpose is to provide members of the task force with summary information about juveniles incarcerated at the IBS and the types of programming received while incarcerated. The study involves gathering demographic, social history, offense history, and institutional programming data for a sample of 382 juveniles released from the IBS over five fiscal years, from 1984-85 through 1988-89, and tracking their subsequent contact with the corrections systems and special jails in the state.

Correctional Simulation/Policy Impact Project

A comprehensive correctional system simulation model (state and parish prisons, probation, and parole) was developed and came on-line January 1, 1986. The purpose of this program is to attach policy impact statements to all proposed policy and statutory changes relative to operational costs, program changes, numbers of inmates affected, and construction. These impact statements are presented to legislators and policy makers as they consider relevant changes.

Felony Sentencing Study

The Felony Sentencing Study is a detailed analysis of 5,000 cases (randomly selected-stratified by judicial district) resulting in felony sentences in 1987. Data were collected from original (primary) sources and cross checked against state databases. The data collected on each case include: specific behavior descriptions, type and level of victim harm, specific victim and offender characteristics, drug/alcohol abuse history, weapon use (what weapon, how used, by whom), and a detailed record of the criminal justice processing decisions from arrest to sentencing. This information will be used in the development of sentencing guidelines, in conducting policy analysis on proposed changes to criminal justice law or policy, and to evaluate current state criminal justice policies.

JJDP Compliance Monitoring

Data are analyzed from three independent, cross validating sources in order to monitor the state's compliance with the separation, jail removal, and deinstitutionalization mandates of the Juvenile Justice Delinquency Prevention Act. This information, coupled with annual on-site inspections and interviews, is used to prepare the compliance reports required by Office of Juvenile Justice Delinquency Prevention. The information is further analyzed with policy recommendations made to local officials as to how the state may better meet the requirements of the JJDP Act.

Louisiana Incident-Based Uniform Crime Reporting System

The SAC began work on the pilot implementation of an enhanced incident-based Uniform Crime Reporting System in November 1989. The purpose of the pilot project is to develop the software and infrastructure necessary for statewide implementation, and to document the utility of the system for local, state, and Federal level policy makers. Initial plans call for interfacing the IBR system with the SAC's various policy simulation models in order to improve the reliability and validity of the policy impact statements currently utilized by the Governor and the legislature in considering changes to criminal justice law and policy.

Grant Management System Support

The SAC provides systems support for the Missouri Division of Highway Safety's Grant Management Information System. A grant management software package developed by Research Triangle Institute (RTI) was installed and is being maintained at the Highway Patrol computer facility. The SAC has developed software programs to download all grant management historical data contained in this information system to the Missouri Division of Highway Safety's computer. This agency designed its own grant management software to utilize the data. SAC support for this project has been terminated and the software package developed by RTI was retired.

MULES Missing Person Project

The SAC developed a program to retrieve data from Missouri's MULES system on all missing persons reported to law enforcement agencies. These data were used for an empirical analysis of all missing persons cases that were in the MULES system in 1984. A report on findings was published. Programs were developed to produce monthly and annual missing person and children reports on a continuous basis and are being provided to the Missouri State Highway Patrol's Missing Children's Unit. The SAC also produced a second report on Missouri's missing person cases that were active in the MULES system from 1985 through 1988.

Mediation and Adjudication

During the past quarter the SAC has begun participating with the Bernalillo County Municipal Courts and the University of New Mexico Law School on a project that will provide basic statistics on cases being processed by the municipal courts through either adjudication or mediation. A major purpose of the Project is to determine whether adjudication processes are substantially different from mediation processes. The study is limited to Bernalillo County, the county which includes Albuquerque and about 40 percent of the State's population. SAC staff plans to assist the courts in collecting data for this project for a one-year period. The final product will be a joint report issued by the courts, the University of New Mexico Law School, and the SAC. The SAC is assisting the court with all aspects of data collection and analysis.

Statewide Survey on Reactions to Crime in New Mexico

A survey of citizens' attitudes toward the problem of crime in their neighborhoods and their reactions to being victims was conducted in July 1989 using random digit-dialing telephone interview procedures. A total of 536 New Mexico residents completed the interview. Included in the survey were questions on fear of crime, levels of community participation, and perceptions of police performance. A key aspect of the survey involved presenting respondents with descriptions of problem situations (including crimes) which might occur in their neighborhoods and asking them to rate the seriousness of these situations and indicate what kind of action they would take in response to them (e.g., talk to neighbors, call the police). Data processing is in progress and results will provide information on such issues as fear of crime, police/community relations, and the role of self-help and community activities in coping with crime. A report is now available.

Trends in Recidivism Among Felons Sentenced to Probation

This study examines trends in recidivism among felony probationers. Both the incidence of recidivism and the time to failure are examined for five separate annual sentence cohorts, spanning the period from 1984 through 1989. Separate analyses are being conducted for each of several different recidivism measures,

and for a number of different subgroups based on region, race, sex, crime type, and prior record.

Study of the Over-Representation of Minorities in the Juvenile Justice System

The Criminal Justice Analysis Center will be assisting the Juvenile Justice Planning Committee of the Governor's Crime Commission in its study of the over-representation of minorities in the state's juvenile justice system. The analysis will attempt to identify the key decision points in the system where racial disparities are the most egregious, as well as the geographic areas of the state with such. The study will also seek to ascertain the reasons for over-representation of minorities through compilation of both qualitative data and qualitative information from system practitioners.

State UCR/IBR Program

The SAC maintains the UCR program in the state. An annual report is prepared summarizing crime data for North Dakota. In April 1988, the state began to convert to an incident-based reporting system. All of the participating law enforcement agencies use a standard state-supplied incident report form. Approximately one-third of reporting agencies transfer data via electronic media. Small agencies were provided with a state developed IBR PC software

NORTH DAKOTA-OHIO

package, modem, and communication software, and were assisted in acquiring PC equipment through Anti-Drug Abuse Act funds. North Dakota is one of the first states to gain acceptance of its programs for submission of NIBRS data to the FBI.

IMPACT Jail Population Projection and Jail Management Assistance

The SAC will provide, to county sheriffs and local police departments, jail population projections utilizing the IMPACT prison and jail population projection software provided by JRSA (formerly CJSA). Technical assistance and consultation designed to assist in implementing and operating software designed to automate jail information and management systems will be provided to all requesting law enforcement agencies.

OREGON

BJA/JRSA Drug Consortium Project

The Oregon SAC represents Oregon and participates with 28 other states in the Consortium for Drug Strategy Impact Assessment. Under the Center's contract, project data is provided on the Multnomah County Structured Supervision (ISP) project. The Center also has arranged a networking conference in Oregon involving staff from ISP projects for technology transfer related to correctional treatment of drug offenders and drug-related offenders on probation and parole. Other activities under this contract include the task of conversion to JRSA (formerly CJS) formatted automated data reporting on ISP projects and the construction of a typology of drug treatment programs.

Evaluation of the "Preparing for the Drug (Free) Years" Program—1989

This evaluation research project involved the use of a quasi-experimental design (a single group, pretest-posttest design) to assess the achievement of short-term objectives identified with the program. The goal of this program

OREGON-PENNSYLVANIA

was to reduce the risk factors associated with adolescent alcohol and drug use/abuse by exposing parents to a five-session series of workshops designed to promote family bonding and communications, knowledge of techniques to deal with adolescent problems, and factors related to adolescent drug use and abuse. The workshops were held in 32 Oregon counties and within four State of Oregon social service agencies. Altogether, 3,402 parents participated in 195 workshops during Spring 1989.

Sexual Offender Project

The establishment of a profile of the sexual offender is a primary purpose of this study. This profile will be obtained through offenders' criminal history records, prison records, and court data. The establishment of a tracking system for sexual offenders as they progress through South Dakota's criminal justice system is the second major goal of this project. It is hoped that data of this type will be used for rehabilitation and education as well as predictive/targeting purposes.

UCR Design (IBR)

This project will establish Incident-Based Reporting in South Dakota. Under this system, the state will be adding more data elements than the FBI's required 52 elements. Due to the nature of the detailed data to be collected, data collection will need to be primarily automated in transmissions from local to state levels. This project will assist local agencies by training officers in the collection of the necessary data and supporting local agencies in establishing automated systems to maintain this data. The project will also involve the development of the state-level system to accommodate the transmissions of data from local agencies and the statistical manipulation of the data.

TEXAS

Criminal Justice Information System Implementation

The SAC develops and oversees the strategic plans for implementing the Criminal Justice Information System. The system links the Computerized Criminal History (CCH) and Correctional Tracking System (CTS) to track offenders through the criminal justice system. Electronic reporting linkages with counties are also being developed to improve court disposition information and to more effectively update the state records. To thoroughly review implementation and build a consensus with state policy makers, the Criminal Justice Policy Council conducted a workshop and has created technical groups to work on the system's design and implementation.

Drug Abuse Data Collection and Analysis

The Policy Council has been designated to conduct the evaluation of state Law Enforcement Anti-Drug Abuse programs. The Policy Council designed a data collection form for distribution to all grantees receiving Anti-Drug Abuse funds. Case tracking data on all persons arrested are being collected allowing comparisons to non-grant funded jurisdictions' anti-drug efforts. Follow-up studies of time served in prison and time served in alternatives to incarceration will be conducted to determine punishment effectiveness.

Justice Model

The SAC developed a PC-DOS-based, discrete event simulation model for the adult corrections system called JUSTICE. The model works with actual computerized records of prisoners and parolees to replicate the movement of offenders in the system. The key characteristics in the record of each offender (like offense and sentence) determine the flow of the offender through the system by triggering certain rules or laws (like parole eligibility) that affect the movement of the offender. Simulating the movement through the adult correctional system of every inmate who is currently incarcerated and of every inmate expected to enter prison for the next ten years allows for accurate projections of the jail backlog, prison, and parole populations. The model also integrates a probation model using aggregate data to project the probation population under supervision. Subroutines in the model, representing specific levels of detail, allow for comprehensive "what if" systemic simulations. JUSTICE provides the SAC with the modeling capabilities to generate policy options for elected officials. Projections from the model have already been used as the basis to fund increased diversionary and prison capacities for the Texas correctional system.

Sexual Assault Report

The Sexual Assault Report analyzes the demographic characteristics of sexual offenders and

their victims, evaluates the frequency of crimes committed in the four categories of sexual assault, and provides offender and victim profiles based on information obtained from UCR contributors.

Data Sources: UCR/IBR, Police Departments, Sheriffs Departments

Date of Completion: Continuing Activity

Agency: Wisconsin Statistical Analysis Center
Office of Justice Assistance
30 West Mifflin Street

UCR Reports for Individual Law Enforcement Agencies

The SAC collects and analyzes UCR data for individual law enforcement agencies. In addition, the SAC prepares reports that include current UCR statistics and five year trends.

Data Sources: UCR/IBR

Date of Completion: Continuing Activity

Agency: Wisconsin Statistical Analysis Center
Office of Justice Assistance
30 West Mifflin Street
Suite 1000
Madison, WI 53702

Contact: Thomas Eversen
(608) 266-7644

Wisconsin County Jail Reports

The SAC collects limited information on jail populations in selected counties. Periodic reports are provided to these counties. Special reports are provided upon request to assist other counties in projecting future jail populations and planning jail construction/expansion.

Data Sources: UCR/IBR, Jail Information System

Date of Completion: Continuing Activity

Agency: Wisconsin Statistical Analysis Center
Office of Justice Assistance
30 West Mifflin Street
Suite 1000
Madison, WI 53702

Contact: Tom Eversen
(608) 266-7644

Wisconsin Crime and Arrests

UCR data are collected, maintained, and used to publish semi-annual and annual reports.

Data Sources: UCR/IBR

Date of Completion: Continuing Activity
Agency: Wisconsin Statistical Analysis Center
 Office of Justice Assistance
 30 West Mifflin Street
 Suite 1000

WYOMING

Automated Fingerprint Identification System (AFIS)

AFIS provides law enforcement with the computerized technology to scan, digitize, and match fingerprints. Wyoming is a member state of the Western Identification Network (WIN).

Data Sources: AFIS
Date of Completion: Continuing Activity
Agency: Division of Criminal Investigation
 Criminal Records Section
 316 West 22nd Street
 Cheyenne, WY 82002
Contact: Gary Goad
 (307) 777-7523

Computerized Criminal History (CCH)

The CCH program is on-line and operational. State legislation requires mandatory reporting, collection, maintenance, and dissemination of criminal history record information.

Data Sources: CCH, Probation/Parole, Corrections Department, Courts, Prosecutors, Police Departments, Sheriffs Departments, AFIS, UCR/IBR

Date of Completion: Continuing Activity
Agency: Division of Criminal Investigation
 Criminal Records Section
 316 West 22nd Street
 Cheyenne, WY 82002
Contact: Gary Goad
 (307) 777-7523

Domestic Violence Reporting Program

DCI will publish quarterly and annual reports on the number of incidents, types of violence involved, times of occurrence, and disposition of all domestic violence incidents reported.

Data Sources: Police Departments, Sheriffs Departments, UCR/IBR
Date of Completion: Continuing Activity
Agency: Division of Criminal Investigation
 Criminal Records Section
 316 West 22nd Street
 Cheyenne, WY 82002
Contact: Kathy Kirby
 (307) 777-7625

Missing Person Program

The Missing Person Program provides law enforcement agencies and the public with information concerning the status of missing persons and children reported to law enforcement agencies in Wyoming.

Data Sources: Police Departments, Sheriffs Departments, NCIC

Date of Completion: Continuing Activity
Agency: Division of Criminal Investigation
 Control Terminal Section
 316 West 22nd Street
 Cheyenne, WY 82002
Contact: Jim Wilson
 (307) 777-7523

UCR/Incident-Based Reporting

The IBR program is in the very early stages of development. Initial programming and testing began during the first quarter of 1990.

Data Sources: AFIS, CCH, Jail Information System, Police Departments, Sheriffs Departments
Date of Completion: Continuing Activity
Agency: Division of Criminal Investigation
 Criminal Records Section
 316 West 22nd Street
 Cheyenne, WY 82002
Contact: Gary Goad
 (307) 777-7523

Uniform Crime Report (Summary Based)

The Criminal Justice Information Section publishes quarterly and annual reports on UCR.

Data Sources: UCR/IBR, Police Departments, Sheriffs Departments
Date of Completion: Continuing Activity
Agency: Division of Criminal Investigation
 Criminal Records Section
 316 West 22nd Street
 Cheyenne, WY 82002

INDEX OF CRIMINAL JUSTICE ISSUES

The index on the following pages of the Directory allows for quick access to the activities listed in Section II. The index contains a list of 38 issue areas in alphabetical order. Below each issues area is the name of the originating state, the titles of the activities which focus on the issue area, and the page on which the complete description of each activity can be found. This list does not encompass all topics concerning criminal justice. Contact JRSA directly for a more detailed search of the Computerized Index to Data Sources (CIDS).

SAC PUBLICATIONS

The following pages of the Directory provide a listing, alphabetically by state, of reports published by the Statistical Analysis Centers between January 1990 and October 1991. For the last eight years, those needing criminal justice information have been able to refer to the Directory for descriptions of current research and analysis activities of the SACs. This listing of SAC publications provides information on the final products of SAC activities.

If you would like more information about a publication, use Appendix 1 of the Directory to contact the SAC which issued it.

APPENDIX B

THE JUSTICE RESEARCH AND STATISTICS ASSOCIATION

JRSA is a professional association of criminal justice analysts, researchers, and practitioners committed to providing accurate and timely information in support of sound policy development. Representatives from state statistical agencies guide and set policy for the Association. JRSA's goals are to 1) expand the analytical capabilities of state statistical agencies; 2) promote the exchange of information and technology within the criminal justice community; 3) encourage cooperation among the states in addressing common policy-related problems; and 4) facilitate liaison between the states and the Federal government.

JRSA was organized by the states as the Criminal Justice Statistics Association in 1974 as a private, non-profit organization. On November 1, 1991, the Criminal Justice Statistics Association became the Justice Research and Statistics Association. Funding is provided by grants, contracts, and membership dues. JRSA works closely with the U.S. Justice Department's Bureau of Justice Statistics and other Federal agencies to promote the effective use of criminal justice information and professional standards for analysts.

JRSA's programs include 1) a clearinghouse of criminal justice resources in the states; 2) conferences and seminars that cover a wide range of criminal justice issues; 3) training in the use of criminal justice computer technologies; and 4) research and evaluation efforts in the area of drug control strategies. Training is conducted both on-site in JRSA's National Computer Center and in selected locations around the country. Topics cover the use of computers for a variety of statistical, graphics, and operational applications, including forecasting criminal justice populations, for which the Association developed IMPACT, policy-driven projections software.

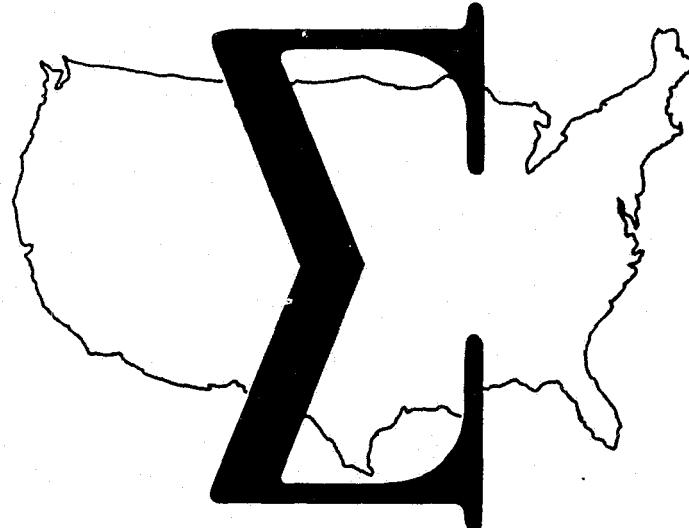

JRSA's publications include the annual *Directory of Criminal Justice Issues in the States* and *The JRSA Forum*, the Association's newsletter, as well as research reports and technical bulletins.

For more information concerning JRSA, please call or write:

Justice Research and Statistics Association

The most comprehensive State policy resource available

Computerized Index to Data Sources

Do you need access to recent applied research and statistics in the states?

The Computerized Index to Data Sources (CIDS) is your solution. This innovative resource developed by the Justice Research and Statistics Association contains information on—

- policy research conducted in 48 states
- published reports on crime and justice from 27 states

The information contained in CIDS is collected from state Statistical Analysis Centers.

Responding to information requests

- What are the major policy issues in the states?
- What states are studying the impact of sentencing changes, domestic violence, or recidivism?
- What states have data on criminal histories, dispositions, parole?

CIDS provides these answers and more.

Conducting custom searches of the database

JRSA can search the CIDS database and provide a summary report to answer specific requests. JRSA can narrow a search by selecting predefined criteria or simply searching for words in the text.

Access

Call JRSA with your request. This service is provided free of charge.

IMPACT...

A software package to help analysts and decision makers project the effects of policy changes on criminal justice populations

JRSA invites you to examine **IMPACT**, a user-friendly forecasting and policy simulation software package for use with IBM pc's and all compatible microcomputers. This package is an easy-to-use, flexible, menu-driven tool that will allow you to forecast criminal justice populations and the anticipated effects of policy decisions.

"Our legislature just passed a mandatory sentencing law. What will be the impact on our future prison population?"

"How will new probation criteria for first-time offenders affect my workload as a probation officer?"

"What will be the effect on the jail population of our new diversion to treatment program for drunk driving offenders?"

IMPACT can help you answer questions like these. Whether you work for a department of corrections, a legislative committee, a budget office, or some other planning or research department, you will find this software useful for projecting and comparing "what if" scenarios. For example, what if drug arrests increase twenty percent next year? What if the increase is forty percent? What would happen to the court dockets in each of these cases? With **IMPACT** you can find out.

A Wide Range of Applications in the Field

IMPACT is used by more than 40 state and local agencies to assess the potential effects of demographic changes, changing incarceration rates, new sentencing legislation, and other factors on criminal justice populations.

IMPACT can play a major role in the forecasting of prison or jail populations, and can also assist you in performing projections in many other criminal justice arenas, such as:

- court caseloads
- probation caseloads
- probation populations
- parole caseloads
- crime patterns
- police workloads

More Than Just Software

Along with the software you will receive a detailed **IMPACT** Users' Guide which includes information on how to design and run a projection, two complete examples, and explanations of all methodologies included in the package. In addition, for one full year you will receive unlimited telephone support from JRSA—not just on **IMPACT**, but concerning any questions you might have about projections design or methodology.

When you order you will also join the network of **IMPACT** users who have many years of experience in projections research and analysis. Through JRSA's National Computer Center, these users receive and exchange information on developments in the field and offer advice concerning the building and maintenance of projections programs.

Cost:

JRSA members—\$700
