Acknowledgement of Assistance

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR Data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for NATIONAL CRIME SURVEYS: REDESIGN DATA, 1975-1979 were collected by the United States Department of Justice. Bureau of Justice Statistics. Neither the collectors of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

United States Department of Justice. Bureau of Justice Statistics.
NATIONAL CRIME SURVEYS: REDESIGN DATA, 1975-1979 (ICPSR 8484)

SUMMARY: These data are a product of the National Crime Surveys Redesign Project. The purpose of the data collection was to create several different data files from existing ICPSR public-use National Crime Surveys files. For each crime, information is gathered on the victim's housing unit and household as well as the incident itself. A personal history and interview are also included. Several data files contain National Crime Survey and Uniform Crime Report data on the following index crimes: robbery, larceny-theft, burglary, motor vehicle theft, rape, and aggravated assault. CLASS IV

UNIVERSE: All persons in the United States.

SAMPLING: Stratified multistage cluster sample.

NOTE: The victimization files were originally part of the NATIONAL CRIME SURVEY: NATIONAL SAMPLE (ICPSR 7635). The full longitudinal files and the longitudinal reference period research file each have five levels. The first level, the housing unit, has approximately 40,000 cases. The second level, the household interview, has approximately 50,000 cases. The third level, the person interview history has approximately 110,000 cases. The fourth level, the person interview, has approximately 350,000 cases, and the fifth level, the incident information, has approximately 42,000 cases. The first level of the longitudinal full file has approximately 60 variables and a logical record length of 150. The second level has 350 variables and a logical record length of 827. The third level has 100 variables and a logical record length of 222. The fourth level has 44 variables and a logical record length of 106, and the fifth level has 190 variables and a logical record length of 314. The first level research reference year file has 70 variables and a logical record length of 160. The second level has 470 variables and a logical record length of 900. The third level has 115 variables and a logical record length of 240. The fourth level has 44 variables and a logical record length of 106, and the fifth level has 190 variables and a logical record length of 314.

Documentation For:

- A) Full Longitudinal File
- B) Incident Level Longitudinal File
- C) Longitudinal Reference Period Research File
- D) NCS/UCR Files

Full Hierarchical Longitudinal File

This is a five-level OSIRIS.IV file which contains all regular NCS interview information collected between January of 1975 through June of 1979. Incoming rotation data for this period are included, except those entering in 1979. Only partial interview data from the reference period research experiment are contained in the file.

The file was created by retrospectively matching existing ICPSR public-use files across panel waves using the sample, household and respondent ID information maintained by the interviewer. The variables on the file, therefore, are identical to those documented in the ICPSR codebooks for the National Sample NCS files. While the variable numbers are not identical between the longitudinal and ICPSR cross-sectional files, the variable descriptions appearing on the respective OSIRIS dictionaries are. In many cases, the order of the variables on the longitudinal records are also identical to those on the ICPSR cross-sectional files. Documentation for the variables on the longitudinal file therefore, can be easily found in the ICPSR codebook using the OSIRIS variable descriptions, along with the knowledge about whether it is household person or incident information.

The file has not been formally checked for mismatches which occurred because of errors in ID variables. The user therefore, should realize that some small portion of the linked records are in error. Informal evidence indicates that the net result of this error is to misidentify stable households/persons as movers.

A description of each hierarchical level follows:

Level 1 - Housing Unit. This consists of sample information and characteristics of the housing unit that do not change across panels (sort vars V1, V2 V3, V4, V5).

Level 2 - Household Interview: This contains all the information collected during all household interviews taken for a particular household. A household is defined as the group of people who are living within a sampled housing unit. If one group of persons move out and are replaced by another group, this is considered another household and a separate Level 2 record is in the file. The record is structured in eleven sections. The first section (VARS 1000 1040) contains the household interview information collected during the incoming rotation interview. All variables on the ICPSR household record that are not level 1 variables are contained in each of these sections. If the household did not have an incoming rotation interview during the 1975-1978 period, then this section is filled with missing data (e.g., if it is a replacement household).

The next 9 sections are filled with any interviews that took place between 1975 and 1979 (June). Each of these 9 sections represents a specific pair of collection quarters. If the household was not interviewed during a specific time period then that section is filled with missing data. When available, non-interview records (type A,

B, C, etc.) were retained in the appropriate places. The variable numbers refer to the following time periods:

V1100-1140 - Collection Quarters 1 and 2 of 1975

1200-1240	"	"	3 and 4 of 1975
1300-1340	"	"	1 and 2 of 1976
1400-1440	"	"	3 and 4 of 1976
1500-1540	"	"	1 and 2 of 1977
1600-1640	"	"	3 and 4 of 1977
1700-1740	"	"	1 and 2 of 1978
1800-1840	"	"	3 and 4 of 1978
1900-1940	"	"	1 and 2 of 1979

The 11th section (VARS 1950 1990) contains the household information for interviews conducted during the first reference period research experiment interview. If a household participated in the experiment, then the sections representing this time period within the second through tenth sections (i.e., vars 1100 V1940) are filled with missing data. For the 3-month experimental groups that had more than one interview only the first will appear in this section. The variables in this section are identical to the other level 2 sections, except V1981, labelled "Ref Period" replaces the "Intrvw Exprmt (TST CDE)" variable appearing in the same relative position in other sections. This variable provides information on which of the experimental groups this household was in. The codes are:

- 1 - 3 month treatment, interviewed in Quarters 1 and 2 of 1978
- 2 - 3 month treatment, interviewed in Quarters 4 of 1978 and 1 of 1979
- 3 - 3 month treatment, interviewed in Quarters 2 and 3 of 1979

4 - 3 month treatment, interviewed in Quarters 4 of 1979 and Quarter 1

5 - 12 month treatment, Quarter 4 of 1978

6 - 12 month treatment, interviewed in either Quarters 1 or 2 of 1979

7 - 12 month treatment, interviewed in either Quarters 3 or 4 of 1979

This variable is useful when trying to figure out why a household has a gap in the interview sequences over time. There is one Level 2 record for every household interviewed (sort vars: v1000 - v1005).

Level 3 - Person Interview History: This record has 11 sections, just like Level 2. Each section contains information on whether the person was interviewed during a particular time period. Each section, therefore, is a subset of the ICPSR Person-interview record. Each section corresponds to the same information as on the Level 2 record. There is one of these records for each person that was interviewed (sort vars:- v2000 - v2006).

Level 4 - Person Interview: This record contains all the information for a particular interview (or non-interview type Z) for a person. There is one of these records for every person interview conducted (sort vars: v3038 - v3043, v3005, v3002).

Level 5 - Incident information: This contains all the information for each incident reported. There is one of these records for each incident reported (sort vars v4196 - v4201, v4005, v4003, v4002).

Special Notes: To check whether a particular section on the Level 2 or Level 3 record contains actual interview data, always use the "Calendar Year of Interview" variable (V1029, 1229, 1329 ... V1979). If this is missing (i.e., not 75 79) then the household has no data. This is

necessary because when the file was created, missing data was not always used to pad sections with no interview.

Location: This data-set resides on four 6250 bpi tapes. There are two files on each tape. The first is the OSIRIS dictionary and the second is the data-set.

Reference Period Research File

This file is a five level OSIRIS.IV file structured in a similar way as the full hierarchical longitudinal file. It was created by pulling records from the full longitudinal file for those persons who participated in the reference period research (RPR) experiment (see Bushery, 1981 for documentation). These records were then modified and supplemented to reflect the interviews from the RPK interviews. Most of the personal and incident interview information in the file is only from those interviews conducted during the reference period experiment.

As with the full longitudinal file, this has not formally been checked for mismatches. The user therefore, should realize that a small portion of the linked records are in error. A description of each hierarchical level follows:

Level 1 - Housing Unit: This consists of sample information and characteristics of the housing unit that does not change across panels (sort vars: V1, V2, V3, V4, V5).

Level 2 - Household: This record contains all information collected during all household interviews taken from households that participated in the RPR study. The record is structured in 12 sections. All variables from the household record, as documented in the ICPSR codebook, are contained in each of these sections except those appearing in level 1. The first section (V1000-V1040) contains the household interview information collected during the incoming rotation interview. If the household did not have an incoming rotation interview during the 1975-1978 period, then this section is filled with missing data.

The next nine sections (V1100-V1890) are filled with any interviews that took place between 1975 and 1979 (June) except those that were taken while the household participated in the experiment. Sections representing the time period when the household participated in the experiment, or when not interviewed at all, are filled with missing data. The variable numbers refer to the following time periods:

1100-1140 - Collection Quarters 1 and 2 of 1975

1200-1240 " " 3 and 4 of 1975

1300-1340 " " 1 and 2 of 1976

1400-1440 " " 3 and 4 of 1976

1500-1540 " " 1 and 2 of 1977

1600-1640 " " 3 and 4 of 1977

1700-1740 " " 1 and 2 of 1978

1800-1840 " " 3 and 4 of 1978

1850-1890 " " 1 and 2 of 1979

The 11th and 12th sections (V1900-1990) contain the household information for interviews conducted during the experiment. Those in the 3-month group have the household information from the first interview in V1900-1940 and second interview in V1950-1990. If two separate households split the two interviews, then each household is represented by a separate Level 2 record. For the 12-month group, the household information is contained in V1950-V1990.

The variables V1931 and V1981 indicate which experimental group the household was in. The codes for this variable are:

- 1 - 3 month treatment, interviewed in Quarters 1 and 2 of 1978
- 2 - 3 month treatment, interviewed in Quarter 4 of 1978 or 1 of 1979
- 3 - 3 month treatment, interviewed in Quarter 2 and 3 of 1979
- 4 - 3 month treatment, interviewed in Quarter 4 of 1979 or 1 of 1980
- 5 - 12 month treatment, interviewed in Quarter 4 of 1978
- 6 - 12 month treatment, interviewed in Quarter 1 or 2 of 1979
- 7 - 12 month treatment, interviewed in Quarter 3 or 4 of 1979

The sort variables for this level are: v1000 - v1005.

Level 3 - Person Interview History: This record has 12 sections, just like Level 2. Each section contains information on whether the person was interviewed during a particular time period. The variables contained in each section are a subset of variables from the ICPSR person interview record (v2000 - v2005).

Level 4 - Person Interview: This record contains all of the information from the personal interview taken during the experiment. For those respondents in the 3-month group that had two interviews, two Level-4 records are in the file (v3038 - v3043, v3005, v3002).

Level 5 - Incident Information: This has all of the information from the detailed incident report taken during the experimental interview. There is one record for every incident reported (v4196 - v4201, v4005, v4003, v4002).

Special Notes: To check whether a particular section on the Level 2 or Level 3 record contains actual interview data, always use the "Calendar Year of Interview" variable (V1029, V1229, V1329, V1429, ... V1979).

If this is missing (i.e., not equal to 75-79), then the household has no data. This is necessary because when the file was constructed, missing data was not always used to pad sections with no interviews.

The "month of occurrence" variable (V4008) is in error for the twelve month treatment group and should not be used.

The survey weights are in error and should not be used.

Location: This resides on a 6250 bpi tape. The first file on the tape is the OSIRIS dictionary and the second file is the data-set.

Reference

Bushery, J.M. "Findings of the NCS Reference Period Research Experiment"
Unpublished Census Bureau Memo to NCS Research Committee, March 3,
1981 (revision of a memo from February, 1981).

Incident Level Longitudinal File

This is a rectangular version of the hierarchical longitudinal file which contains a record for every incident in the file. See the description of the full longitudinal file for details of exactly what NCS interview the universe pertains to. For each incident reported, each record contains: 1) All household information from every interview conducted while the unit was in sample (levels 1 and 2 in the full longitudinal file), 2) interview history information for all of the interviews for the person reporting the incident (level 3 in the full longitudinal file), 3) all of the personal interview information for the first time the person was interviewed (level 4 in the full longitudinal file for first interview) and 4) all the incident information (level 5 in the full longitudinal file).

The record carries the identical eleven section structure of the level 2 and level 3 records in the full longitudinal file as described in the documentation for that file.

The file is structured so that if a person reports more than one incident, the household and person information are repeated on separate records for every incident reported. The structure can be translated into OSIRIS.IV &ENTRY language as:

entry=1 unit=5

G1+G2+G3+G4+G5

where the G4 information always represents the first time the person was interviewed.

Location: This resides on two 6250 bpi tapes. The first file on each

tape is the OSIRIS dictionary and the second file is a volume of the
data-set. The rack numbers are:

rack: c3506k vol=bjs08

NCS and UCR Aggregate Files

Producing the series of papers on the divergence of the NCS and the UCR trends (Biderman, Lynch and Peterson, 1983; Biderman and Lynch, 1984; Lynch, 1983) required the creation of two sets of files which included both NCS and UCR data. One file is a national level data set that includes weighted NCS counts for rape, robbery, aggravated assault, burglary, larceny, and auto theft for each year from 1973 through 1980. In addition, this file includes population counts and NCS population counts by bounding status and household respondent status. These files were created by obtaining the requisite NCS counts from the NCS public use tapes. These counts were used to construct LOTUS files for use in rate computation. A second set of files were constructed for each of the ten size of place distinctions used in Crime in the United States (FBI, 1973-1980), Table 10. Three different types of files were constructed. One included estimates of NCS and UCR counts for each size of place for each year from 1973 to 1979 for all Index Crimes. A second file included only estimates of burglary in the two series for each year and each size of place. Estimates of agency characteristics such as size and % civilian were also included. A third file contained estimates of the change in NCS and UCR burglary rates for each year and each size of place. A more specific listing of file contents follows.

National Level LOTUS Files

This spreadsheet includes NCS weighted counts of incidents by year bounding status and household respondent status for each of the following types of crime:

- Rape
- Robbery-using the victimization weight
- Aggravated Assault
- Burglary
- Larceny
- Pocketpicking
- Total Larceny-includes both larceny and pocketpicking
- Robbery2-using the incident weight

The NCS population counts by bounding household respondent status were also included. Rates for each year, crime class and respondent type are computed. The file is called NCSUCR2C.

Size of Place Files

Including All Index Crimes. This file includes the following variables:

- Year
- Size of Place-1000000+, 500000, 250000, 100000, 50000, 25000, 10000, LT-10000, Suburban, Rural
- NCS Robbery Counts including one series incident
- NCS Robberies Reported to Police
- NCS Larcenies Counts including one series incident
- NCS Larcenies Reported to Police
- NCS Burglary Counts including one series incident
- NCS Burglary Reported to Police

NCS MVT Counts including one series incident
NCS MVT Reported to Police
NCS Rape Counts including one series incident
NCS Rape Reported to Police
NCS Aggravated Assaults including one series incident
NCS Rapes-victimization weight
NCS Aggravated Assaults victimization weight
NCS Robbery-victimization weight
