INTRODUCTION

HISTORICAL DEVELOPMENT

In 1973, the National Criminal Justice Information and Statistics Services (the predecessor of BJS) established the Comprehensive Data Systems (CDS) program. The primary goal of this program was to assist states in developing operational statistical information systems in an effort to improve the criminal justice process. A component of the CDS program was the Computerized Criminal Histories/ Offender Based Transaction Statistics (CCH/OBTS). It centered on arrested alleged offenders, and was designed to supply information regarding the individual's prior criminal activities as well as the formal criminal justice system response. In addition, OBTS provided information on the criminal justice process and the time necessary to complete various stages within the process.

DATA COLLECTION DESCRIPTION

The Offender Based Transaction Statistics consist of data which allow examination of offender characteristics and patterns of court action and case disposition. Collected by individual states from existing data, the dataset includes all cases which reached disposition during the calendar year 1980. This means that regardless of the date which an individual offender entered the criminal justice system, if he/she was given final disposition of their case during 1980, they are included in this dataset. In essence, this dataset provides a description of the administration of adult criminal justice in terms of the flow of offenders through the system and the time intervals between various events. There are selected facts about arrested offenders, and the actions taken by police, prosecutors, and courts.

Using the individual adult offender as the unit of analysis, selected information is provided about the offender and his or her arrest, prosecution, and court disposition. Examples of variables included are: arrest and level of arrest charge, date of arrest, charge filed by the prosecution, prosecutor or grand jury disposition,

type of counsel, type of trial, court disposition, sentence type, and minimum and maximum sentence length. Dates of disposition of each stage of the process allow for tracking of time spent at each stage. In cases where the offender is charged with multiple offenses, the most serious charge and most serious outcome at each stage of the process (from the offender's point of view) are provided.

The Bureau of Justice Statistics (BJS) compiles and disseminates statistical information concerning the operation of the criminal justice system at the Federal, state, and local levels. The OBTS dataset is one such collection of information. The data are in one file which has 54 variables for 255,578 cases.

METHODOLOGY

The data for OBTS was collected on a state-by-state basis. Individual states conducted their own data compilation from existing data. Data tapes were then transported to the Regional Justice Information Service (REGIS) for condensing and editing. As stated above, the unit of analysis is the individual offender. For this study an offender is defined as any person who is processed by the police, prosecutor, or courts regardless of whether or not there is a final determination of guilt. Adult status is specified by individual state laws. Any juvenile processed as an adult is considered an adult. The data was checked for errors first by the individual states. Then after the data was sent to REGIS, a second check was made. Specific data elements were validated individuals or as a component of conditional checks. Validation checks insure that each data element is in the proper format and range, while conditional checks are for correctness of relationships between data elements.

Definitions used in this study are taken from the Dictionary of Criminal Justice Data Terminology (Second edition, 1981), published by BJS. These definitions appear in the glossary. Due to differences among state statutes regarding criminal offense codes, the National Crime Information Center (NCIC) codes are used here. The codes appear in Appendix A. Also, arresting agency codes referred to in ICPSR variable 13 can be obtained from the Federal Bureau of Investigation in Washington, D.C.

FILE STRUCTURE

The Offender Based Transaction Statistics (OBTS), 1980: California, Pennsylvania, and Ohio is available from the ICPSR in two formats: card image and OSIRIS. The card image file contains two decks per case in a format based on 80 column punched cards. The data are sorted by case with all decks for a case together in ascending order.

The OSIRIS dictionary gives the format and other information for each variable in the OSIRIS data file. The dictionary or dictionary-codebook file is used in conjunction with the OSIRIS software package. The OSIRIS data file is constructed with a single logical record for each case. As mentioned in the Data Collection Description, there are 54 variables on 255,578 cases.

The OSIRIS data file can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the tape locations of the desired variables. These tape locations are given in the OSIRIS dictionary-codebook.

CODEBOOK INFORMATION

The example below is a reproduction of information
appearing in the machine-readable codebook for a typical
variable. The numbers in brackets do not appear but are
references to the descriptions which follow this example.

        both minimum and maximum

....

[1] Indicates the variable and reference numbers.
     A variable number and a reference number are
     assigned to each variable in the data collection.
     In the present codebook which documents the
     archived data collection, these numbers are
     identical. Should the data be subsetted or
     rearranged by an OSIRIS program (e.g., MMP to
     intersperse data from another source, or TCOT to
     produce an analysis deck), the variable numbers
     would change to reflect the order of the new data
     collection, while the reference number would remain
     unchanged to reflect the variable number in the
     codebook describing the archived data collection.

[2] Indicates the abbreviated variable name (maximum
     of 24 characters) used in the OSIRIS system to
     identify the variable for the user. An expanded
     version of the variable name can be found in the
     variable description list.

[3] Indicates the code values of missing data. In
     this example, code values equal to 999 are missing
     data. Alternative statements for other variables are
     "MD=0," "MD=8 GE 9," or "NO MISSING DATA CODES."
     Some analysis software packages (including the OSIRIS
     software package) require that certain types of data
     which the user desires to be excluded from analysis
     be designated as "MISSING DATA," e.g., inappropriate,
     unascertained, unascertainable, or ambiguous data
     categories. Although these codes are defined as
     missing data categories, this does not mean that the
     user should not or cannot use them in a substantive
     role if so desired.

[4] Indicates the starting location and width of this
     variable when the data are stored on a magnetic tape
     in the OSIRIS format. If the variable is of a
     multiple-response type, the width referenced is that
     of a single response. In this example the variable
     named "SENTENCE MAXIMUM:YEARS" is 3 columns wide
     and is located in the 118th column within the record.

[5] Indicates the location by deck and column(s) of
     this variable when the data are stored on cards or in
     card-image format (80-column format)

[6] A variable containing data with implied decimals
is denoted by the message "IMP DEC=d," where d is
the number of decimal places implied in the variable.

[7] This is the full text (question,) supplied by the
investigator to describe the variable. The question
text and the numbers and letters that may appear at
the beginning reflect the original wording of the
questionnaire item.

[8] A variable which has a footnote associated with it
is denoted by the message, "SEE NOTES(S) X" where "X"
is the number of the footnote referenced.

[9] "Actual number is coded" appears in the codebook to
indicate that the variable has been declared
continuous.

[10] Indicates the code values occurring in the data for
this variable.

[11] Indicates the textual definitions of the codes.
Abbreviations commonly used in the code definitions
"DK" (Do Not Know), "NA" (Not Ascertained), and
"INAP" (Inappropriate).

[12] Indicates an additional comment or explanation
appended to the variable description.

ICPSR PROCESSING INFORMATION

The data collection was processed according to the
standard ICPSR processing procedures. The data were checked
for illegal or inconsistent code values which, when found,
were recoded to OSIRIS missing data values. No consistency
checks were performed. Statements bracketed in "[" and "]"
signs in the body of the codebook were added by the
processors for explanatory purposes.

NCIC UNIFORM OFFENSE CLASSIFICATIONS

Uniform Offense Classifications
Offenses of General Applicability

The following offenses of general applicability are to
be integrated into the related substantive literal and
numerical uniform offense classification by adding the
general offense alpha abbreviation, below, or more nearly
complete word(s) when space allows, to the substantive
literal uniform offense classification when translated and
printed. The appropriate alpha General Offense Character
(GOC), below, will be used to supplement the substantive
numerical uniform offense classification.

General Offense	General Offense Character (GOC)	General offense alpha abbreviation
Accessory after the fact	Z	ACAF
Accessory before the fact	Y	ACBF
Aid/abet	X	ABET
Assault to commit	B	ASLT
Attempt to commit	A	ATPT
Conspiracy to commit	C	CNSP
Facilitation of	F	FACL
Solicitation to commit	S	SOLC
Threat to commit	T	THRT

The offense definitions provided within your juris-
diction will apply for these terms. However, in no case
will these terms stand alone as an offense (e.g conspiracy
or solicitation will not stand alone), but will in all
instances be used with the substantive offense involved.

For example, literal offenses (as indicated at the left
below) would be printed by translating the data included in
the General Offense Character (GOC) and numeric offense
codes (AON or CON) (as indicated at the right below).

Literal offense (as translated and printed)	General Offense Character (GOC)	Numeric offense code (AON or CON)
*ATPT Robbery--business--gun--....	*A	1201
*CNSP Heroin--smuggling--.........	*C	3511
*ASLT Rape--stgarm--..............	*B	1103

(Words and characters preceded by an asterisk indicate use
of above general offenses.)
